

SHUBHAM SHARMA

Full Stack & AI Engineer | Web · Mobile · Cloud | GenAI & Distributed Systems

shubham27.sharma03@gmail.com | +91 9958538871 | Ghaziabad, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Winner, Google GenAI Hackathon 2024 (Fintech Track, 100+ teams). Full Stack Engineer with 2+ years building production systems across web, mobile, and cloud — from microservice backends and distributed platforms to Flutter mobile apps and React frontends. Designs and ships AI-native products end-to-end: multi-agent RAG systems, LLM orchestration, and GenAI features at production scale. Comfortable across GCP, AWS, and modern cloud-native infrastructure.

CORE SKILLS

Languages & Frameworks: Python, Golang, Node.js, TypeScript, React.js, Flutter, Dart, Flask

Mobile & Web: Flutter (iOS & Android), React.js, TanStack Router, Tailwind CSS, Chrome Extensions

AI / GenAI: Multi-Agent Systems, RAG, LLM Orchestration, Agentic Workflows, Vertex AI, LLM Infrastructure

Cloud & Infrastructure: AWS (ECS, RDS, S3, ALB, SNS), GCP (Cloud Run, Firestore, Pub/Sub, Vertex AI), Docker, Kubernetes, GitHub Actions, CI/CD

Data & Systems: PostgreSQL, MongoDB, Redis, REST API Design, System Design, Distributed Systems, SSE / Async Processing, Playwright

EXPERIENCE

Full Stack Engineer | S2T AI

Nov 2025 – Mar 2026 | Singapore

- Architected a scalable, profile-centric OSINT investigation platform with a distributed backend, PostgreSQL, and React.js micro-frontends enabling investigator workflows across **6+ data sources**.
- Built identity-resolution pipelines (keyword search, username expansion, evidence correlation) reducing false positives across high-volume crawler data.
- Implemented real-time async progress tracking using Server-Sent Events (SSE) and TanStack Router micro-frontend, reducing perceived wait time by **40%**.
- Optimized backend aggregation pipelines for distributed, event-driven workflows, reliably processing **10K+ records per search** without frontend degradation.
- Refactored crawler orchestration and evidence-mapping, reducing failed executions and broken data links by **30%**.

Founding Full Stack Engineer | Platelink.ai

Nov 2024 – Oct 2025 | London, UK

- Designed and deployed a microservice-based ordering platform live with **15+ partner restaurants**, processing **10K+ orders/month** at **99.95% uptime** — sole backend founding engineer.
- Owned backend architecture (Golang + Python microservices) and AWS deployments (ECS, ALB, RDS, S3, SNS) end-to-end; integrated Nash for last-mile delivery and Twilio/SendGrid for multi-channel messaging.
- Built an AI-powered food & nutrition tracking **Flutter mobile app** (iOS & Android) with Golang + Python microservices — reduced manual tracking time by **60%**, boosted DAUs by **45%**, reached **92%** meal-log accuracy in pilot.

Freelance Full Stack Engineer & Technical Consultant | Independent

Oct 2025 – Present | India

- Running an independent practice combining hands-on full-stack development (web + mobile) and architecture consulting for early-stage startups across four concurrent clients.
- Built a full **Chrome Extension for LinkedIn Lead Discovery** (KEEL) — DOM scraping with fallback selectors, multi-page Sales Navigator pagination, checkpoint save/restore, connection degree extraction, Extension ↔ backend task queue integration with authentication, heartbeat tracking, task leasing/recovery, rate limiting, and kill switch support; verified with **50 backend tests**.
- Replaced a **₹8,200/month third-party tool (Expandi)** per client by building a Cloud Run + Pub/Sub async pipeline for reply processing and ICP scoring — leads flow through staging → scoring → production with audit logging, 30-second cooldowns, and Firestore composite indexing.

- Built a **multi-platform AI content engine** (LinkedIn, X, Facebook, Instagram) with Vertex AI Imagen 3 carousels, Reddit/Quora community engagement, real-time industry news via Currents API, WhatsApp approval flow to founder, and channel routing with **48-hour deduplication**; eliminated **~66% duplicate LLM synthesis token usage** across orchestrator flows.
- Designed and implemented **GitHub Actions CI/CD pipelines** and migrated production repositories to GitHub; deployed and managed full-stack services on Hostinger VPS with GoHighLevel CRM integration (Transportvibes).
- Built **custom REST APIs** and frontend applications for logistics workflows; refactored legacy codebases and built automation pipelines (Searchlook).
- Served as **architecture lead** for an early-stage startup (Reclevo) — defined scalable architecture across frontend, backend, and cloud; advised on speed-vs-scalability trade-offs.

PROJECTS

Lumenslate — AI-Powered Multi-Agent Teaching Assistant

2025

- Designed a multi-agent, LLM-powered RAG system for question generation, automated grading, and performance analytics — improved teacher productivity by **40%**.
- Built Golang and Python microservices on GCP (Vertex AI, Firestore, Cloud Run) for scalable AI workflows.

AarthikSetu — GenAI Platform for MSMEs

2024

- Engineered scalable Golang REST APIs with Redis caching, reducing response time by **30%**; implemented multi-layer authentication (JWT, OAuth 2.0, OTP-based Firebase Auth) eliminating single-password attack surface.
- Deployed containerized services on Google Cloud Run with **99.9% uptime**.

EDUCATION

B.S. in Data Science and Applications — Indian Institute of Technology, Madras | 2021–2025

B.Tech in Information Technology — Jaypee Institute of Information Technology | 2021–2025

ACHIEVEMENTS

- Winner — Google GenAI Exchange Hackathon 2024 (Fintech Track), outperforming 100+ teams
- 3rd Prize — IIT Madras GenAI Hackathon, surpassing 50+ teams
- Open-source bounty recipient at UnityHack 2024 & 2025; contributor to 20+ open-source repositories
- Kaggle Notebook Expert & Dataset Expert; Finalist, IIT Bombay Abyuday
